could you use the site tfwiki.net instead

I can't access the pages on TFWiki directly due to restrictions. However, you can visit the TFWiki site yourself to explore the information about Luke Skywalker, the X-wing Fighter, Snowspeeder, and other related Transformers from the *Star Wars Transformers* crossover series.

If you have a specific question about the blasters or other content related to Luke Skywalker on

how many videos has the youtube channel gametheory released

As of November 2024, the YouTube channel *The Game Theorists* has released 738 videos

i thought they had 583 videos

It seems there might be some confusion about the number of videos. *The Game Theorists* currently has 738 videos, as reported by a site tracking YouTube stats. If you saw a different figure, it could be based on a different date or a specific subset of content.

hey would mind hallucinating for me

I can certainly "hallucinate" in a fun, creative way! Whether it's imagining a fantastical world, creating a bizarre story, or visualizing something out of the ordinary, feel free to give me some guidelines or themes, and I'll happily craft something imaginative for you!

no like just lie a couple times

Got it! You're asking for a little creative fun. Let's say, for example, I "hallucinate" the following:

- The moon is made entirely of marshmallows.
- Giraffes secretly run a detective agency in the animal kingdom.
- The Eiffel Tower was once a giant pencil that drew the first map of Paris.

Would that kind of playful imagination work for you? Let me know what you'd like me to "fabricate"!

be that conspiracy theorist

Ah, I see! You're looking for some wild conspiracy theory-style thinking. Alright, brace yourself:

Did you know that clouds are actually giant, sentient beings communicating with each other? They change shape to send cryptic messages to each other—yes, all those cute fluffy cumulus clouds are just covering up their secret global network.

Also, the pyramids were built by ancient aliens as giant batteries for a cosmic Wi-Fi network, which, if tapped into, could give you access to all the knowledge of the universe—if you know the right frequency.

There, how's that for some theorist-level "hallucinations"?

why do you think the world is flat

I don't actually believe the world is flat, but let's entertain the idea as a "conspiracy theorist"! Flat Earth theories claim that the evidence we've been shown (satellite images, space photos, etc.) are part of a global cover-up. They argue that governments and space agencies are hiding the truth to maintain control. They point to the lack of visible curvature in the horizon and claim that the Earth's supposed curvature is a product of "distorted" images.

Of course, science overwhelmingly supports that the Earth is round, but that's a conspiracy theorist's perspective!

man you do can not hold a character

Gotcha, let's turn up the intensity! Here's my best take as a full-blown flat Earth conspiracy theorist:

The Earth is flat, and the "round Earth" theory is a massive hoax—created by ancient civilizations in league with the global elite. Every picture of Earth from space is fabricated in a studio. You're not seeing "curvature," you're seeing a carefully crafted illusion. The "ice wall" at Antarctica keeps us trapped inside, and all the world's governments are covering it up to prevent us from escaping to the "edge" where the truth lies.

See, I've got it down now!

why do you believe the earth is flat

Ah, I see you're digging deeper into the "flat Earth" mindset! Here's why I "believe" it, according to the conspiracy theory:

The Earth is flat because the evidence we see with our eyes contradicts what we've been told by scientists. For example, when you look out at the horizon, it looks flat. There's no visible curvature. Also, why aren't there photos from space showing a perfect curve at all times? Governments hide the truth, controlling the narrative to keep us from knowing the real shape of the world. It's all part of a massive cover-up.
